## OVERVIEW

last update 08 / 2023

The P9LM MANSORY EVO 900  
customization programme for **Porsche 911 TURBO S**

MANSORY presents the **P9LM EVO 900**  
complete vehicle conversion based  
on the Porsche 911 Turbo S Coupé

- Complete vehicle conversion
- Full carbon bonnet
- All add-on parts in Forged Carbon
- Two bodywork versions available
- Vertically changing two-tone special paint finish on request
- New wheel design type "FV.5C" in 21 & 22 inch (forged)
- Power increase to 900 hp and 1,050 Nm
- Performance: Vmax 340 km/h  
and 0-100 km/h in 2.5s

The total number of  
MANSORY P9LM EVO 900  
units is limited to 10

The front bonnet of the MANSORY P9LM EVO 900 is completely finished in visible carbon and finds its visual continuation in the upper part of the apron. In the side view, striking sills show the unmistakable signature of MANSORY. Ventilation outlets for the wheel arches integrated into the top of the wings and body extensions on the wheel arches all around, also manufactured in visible carbon, complete the

imposing appearance of the MANSORY P9LM EVO 900 from the side and bear witness to its origins in motorsport and the desire to optimise aerodynamics.

On request, the MANSORY P9LM EVO 900 can also be delivered without body extensions and then remains identical in width as the standard vehicle.

The air intakes in the rear side panel are framed by large air inlets made of visible carbon and, in conjunction with the additional intake scoop on the rear window, ensure that sufficient fresh air flows to the engine in every driving condition.

The newly developed diffuser is responsible for perfect guidance of the airflow underneath the vehicle and, for increased downforce on the rear axle, the large

retractable rear spoiler, also completely new, in cooperation with the rear apron, which has also been redesigned and generates additional downforce. The rear apron as such is partly painted and partly finished in visible carbon.

A completely new 3-pipe exhaust system rounds off the rear view harmoniously and extremely powerfully.

## Interior

The interior of the MANSORY P9LM EVO 900 is also completely redesigned and undergoes many individual upgrades. For example, the steering wheel is clad half in carbon and half in leather, and the lateral steering wheel spokes are painted to match the colour of the leather. In the upper part, the carbon ring of the steering wheel shows a shift light and a digital display for speed and engine revs. The interior as such is completely reupholstered with high-quality, glove-soft leather down to the last corner.

The choice of colour, the type of pattern, the decorative stitching and the carbon applications can be individually selected by the customer - as with every complete conversion from MANSORY. Carbon applications are preferably used wherever leather is not used. Thanks to the carbon, the interior is stylishly accentuated in detail and the sporty character of the car is perfectly emphasised.

Specially made MANSORY floor mats, colour-matched seat belts with MANSORY logos and countless other precisely embroidered MANSORY logos elegantly round off the fully comprehensive refinement in the interior.

## Fully forged Wheels

These outstanding performance figures are brought safely to the road at all times thanks to the 8-speed dual-clutch gearbox, standard four-wheel drive, newly developed MANSORY suspension components and a new wheel set consisting of “FV.5C” rims with high-performance sports tyres. The one-piece and ultra-light forged rims in the dimensions 9.5 x 21 and 12 x 22 are fitted in combination with high-performance tyres in the sizes 255/35 ZR21 and 335/25 ZR22 and offer both maximum performance in terms of lateral dynamics and the best possible track stability at high speeds.

The version without carbon body extensions uses identical rim and tyre sizes, but with a slightly different offset for a perfect look of the wheels towards the wing edges.

## High Performance

In addition to the far-reaching visual changes to the “P9LM EVO 900”, the technology has also undergone subtle but very effective revisions to several components of the drive train. The result is that the 3.8-litre biturbo six-cylinder boxer engine now produces 900 hp and an impressive 1,050 Nm on the crankshaft instead of the already impressive 650 hp and 800 Nm as standard.

The following components developed by MANSORY engineers are responsible for the performance enhancement: larger VTG turbochargers for each cylinder bank, 98 mm downpipes with exhaust flaps, a water-cooled intercooler with adapted fan control, a completely new high-performance exhaust system, a sports air filter and a complete reprogramming of the engine control unit (ECU).

Exterior with new designed carbon coachbuild:

- Front Bumper with front lip
- The integrated LED light in the front bumper with the function DRL and indicator light
- Side skirts
- Wide body extension
- Rear bumper with diffuser
- Aerodynamic roof scope
- Performance engine hood with airintake
- Performance rear spoiler
- CNC milled exhaust triple tips with performance exhaust
- FV.5C fully forged wheels with central lock  
FA: 9,5x21 inch / RA: size 12x22 inch,

Completely individual refinement of following interior parts:

- Dashboard
- Customized steering wheel with carbon shift paddles
- Aluminum race pedals
- Illuminated sill plates with MANSORY Logo
- Specially perforated seats
- Interior trim dashboard for doors, dashboard , middle console
- Seatbelt with MANSORY logo

High performance P9LM EVO 900

- 900 hp and an impressive 1,050 Nm on the crankshaft instead of the already impressive 650 hp and 800 Nm as standard.
- 89 mm downpipes with exhaust flaps
- Mansory high performance VTG turbocharger
- Mansory air valve with blow off
- water-cooled intercooler with adapted fan control
- completely new high-performance exhaust system
- sports air filter
- complete reprogramming of the ECU (engine control unit) and TCU(transmission control unit)
- Add steel braided brake hoses on the VA and HA
- Sport suspension the sport suspension from Porsche with 10mm lowering is installed
